

# WELCOME TO MJØSAS ARK

## The museum of lake Mjøsa!

Did you know that Vikings sailed on Mjøsa? Or that Stone Age men hunted moose along the beaches? Mjøsa is Norway's largest source of drinking water – did you know that Mjøsa was so polluted in the 1970's that it was no longer possible to go swimming? Or that the smuggling of spirits on Mjøsa during the prohibition was just as large as that in Oslo? Mjøsa's ark is a journey through 8000 years, with real Viking swords, old stone carvings and important environmental awareness!

We accept bookings from groups and bus tours all year round, and can adjust the tours to accommodate particular requests. The visit can also be combined with a visit to one of our other sites, such as the district governor's farm Stenberg with the original buildings from around 1814 still intact.

Groups up to 15 people: 1000 NOK  
(minimum price for group booking)

Groups of more than 15 people: 65 NOK per person

Adress: Fabrikkvegen 88, 2849 Kapp  
Entrance from the lake side
